#### GT iGEM Team Winning a Gold Medal in iGEM 2021

We are delighted that the GT iGEM team (HK\_GTC) was awarded a Gold medal in the International Genetically Engineered Machine (iGEM) Competition 2021.

Led by Dr. Christine Yu, the iGEM team students had been working for more than a year on the project entitled "PETase & Related Analogous Chimeras Transfused in Computer and Al Learning (PRACTICAL)". As one of the most valued learning experiences in secondary school, all participating students developed teamwork and problem-solving skills.

Congratulations to all audacious explorers of science!

Dr. Christine Yu Assistant Principal

I learnt not only a lot of different analysis methods and programming knowledge but also the communication skills. We should be more motivated on things we want to achieve.

#### Gabriel Leung (11A), Team Leader of iGEM 2021

The research stage is always the hardest. Once you figure out more about your topic and decide your direction, it will be much easier. I learnt not to give up just because the researching phase is difficult.

#### Belovffy Liu (10A), Team Leader of HP Team

The gold medal signifies that our one and a half year of hard work and effort did not go down the drain. I am very honoured to achieve the Gold medal alongside other extremely capable university teams such as HKUST.

#### Jonas Fok (11C), Team Leader of Drone & Al Team

This competition is not about memorizing theories and writing it down in an exam paper, but actually applying those knowledge to create something innovating.

#### Heison Wong (11A), Member of Research Team

Joining this competition really broadened my horizons. I never know genetic engineering is so complicated. I have also learnt how to immediately respond to questions raised by judges, teachers and students.

#### Gordon Leung (10A), Member of HP Team

No matter how unimaginable your project was, but I'm deeply believed in if you are passionate enough about that and willing to put effort into it, you will succeed finally.

#### Josh Ho (10A), Member of Drone & Al Team

Remind yourself that every part of the journey is a learning process and be prepared to step out of your comfort zone.

#### lan Yeung (10A), Member of Research Team

I learnt lab experiment skills during the process of doing experiments. I also learnt that some tasks are impossible for one person to finish. We will need to take up the challenge together.
